Studying Trees:

Bio-mechanical Features

Life Belts form after the tree fibres have buckled. It is also known as bulge wood.

Kissing Limbs can form when two limbs rub together in the wind.

Kissing trees may grow together, this is called tree welding. They can feed each other water & sugar.

When twin stems grow closely together they can form an acute

If an acute fork has a lot of bark between the two stems, a big rib forms on either
